

ENGLISH SUMMARY

ON THE CREEP AND STRESS RELAXATION OF CONCRETE

Folker H. Wittmann

Rakenteiden Mekaniikka 4 (1971) pp. 63 to 79

A presentation is made of the way in which the basic equations of linear viscoelasticity correlate the creep deformation and the stress relaxation. Various attempts at the introduction of simplified methods are discussed. Finally, an elementary approach is described. The results of this calculation are comparable with experimental data. Fair agreement has been achieved within the range of accuracy given.
